7 Bioretention Tree Well with trash capture

TURNER COURT
DESIGN AND CONSTRUCTION
PHASE 1
www.aclwd.com/water

Using the power of nature, engineering, and artistry to prevent pollution and reduce flooding.

A Solution with Walkable Surface
Combining trash capture and bioretention, this tree well maintains permeability across where space is limited. After trash is captured by a screen, stormwater enters the bioretention area where the biotreatment will media filter out pollutants. Stormwater not used by the tree percolates into the ground or enters the storm drain system through a perforated underdrain.

This system was developed by the City of Fremont and is included as a standard detail for construction. While the tree bioretention system is used, the grass can be omitted, and the area is paved.
